Iowa Influenza Surveillance Network (IISN)

Influenza and Other Respiratory Virus Weekly Activity Report

For the week ending June 20, 2009, Week 24

Influenza Quick Stats*:

Iowa activity level: **Sporadic¹**
Lab-confirmed cases: 5
Outpatient % ILI²: 0.44% (threshold 2.1%)
Hospitalizations for ILI²: 1

School ILI² and ≥10% absence reports will resume this fall (2009-2010 school year).

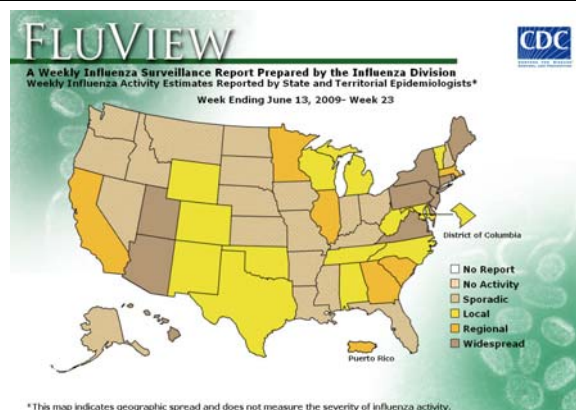

Iowa Summary

Iowa is experiencing minimal levels of pandemic influenza activity. One hospitalization due to pandemic influenza was reported this week in an Iowa child.

Testing criteria are limited to patients at high risk for complications from influenza and hospitalized with influenza-associated conditions.

The RSV surveillance program is being revised. The Iowa Department of Public Health is working with the University Hygienic Laboratory and other health partners to ensure data reported next year more accurately reflects RSV activity in the state. RSV data will be re-introduced to this report late summer or early fall.

Laboratory-confirmed cases: (excludes rapid test positives; only weeks with cases are included in the table; includes several labs)

*This map indicates geographic spread and does not measure the severity of influenza activity.

Lab-confirmed influenza cases by age group

Lab-confirmed influenza cases by type and strain

¹ **No Activity:** No laboratory-confirmed cases of influenza and no reported increase in the number of cases of influenza-like illness (ILI²).

Sporadic: Small numbers of laboratory-confirmed influenza cases or a single influenza outbreak has been reported, but there is no increase in cases of ILI².

Local: Outbreaks of influenza or increases in ILI cases and recent laboratory-confirmed influenza in a single region of the state.

Regional: Outbreaks of influenza or increases in ILI and recent laboratory-confirmed influenza in at least two but less than half the regions of the state.

Widespread: Outbreaks of influenza or increases in ILI cases and recent laboratory-confirmed influenza in at least half the regions of the state.

² ILI: Influenza-like Illness is defined as a fever of ≥100° F as well as cough and/or sore throat.

Division of Acute Disease Prevention and Emergency Response
Center for Acute Disease Epidemiology

Laboratory-confirmed cases are primarily reported by the University Hygienic Laboratory (UHL). UHL also determines the type and strain such as seasonal A (H1), seasonal A (H3), and Novel Influenza A (H1N1). Influenza is not a required reportable disease. Laboratory data is used to confirm the presence of influenza and the types and strains circulating, not determine the exact number of cases in Iowa.

TOTAL	84	7	1	0	9.5%

Outpatient Health Care Provider Influenza Surveillance (Sentinel Surveillance):

There are 18 sentinel surveillance sites throughout Iowa surveying patient populations for influenza-like illness (ILI²).

# sites reporting	3
Age 0-4	2
Age 5-24	4
Age 25-64	0
Age over 64	0
Total ILI	6
Total patients	1,334
% ILI ²	0.44%

Hospital and Long-term Care Facility Influenza

Surveillance:

There are 29 hospitals participating in influenza surveillance. Hospitals track the total number of patients hospitalized weekly with ILI² or pneumonia who also have a positive influenza laboratory result. The total number of patients surveyed this week was 120.
